

Release 11: Changes to the Seller Interface

The following list includes those items that Admin users may notice immediately following Release 11. Please review the list and logon to Staging to determine how these changes may impact your business.

1. Custom User Fields: There is a new section on the Admin tab to create/edit custom user fields. Additionally, a new tab will appear on the Buyers tab when a company/group/user is selected called "User Fields."
2. Line Item Report: The Product Name/ID field will provide options based on your search criteria. If a specific product is selected, the results will be limited to that one. If no product is selected, a search for all products that match will be done.
3. Home Page: In order to improve the time it takes for the Home page to load, we have put a delay on loading the order status counts.
4. Approval Rules: There is a new way to order sequential approval rules.
