

## Release Notes: Release 11, June 2009

Release 11 centers around process improvement enhancements for the Admin interface. One example is Custom User Fields which allow details about a company, group or user to be entered one time and used multiple places. The complete list is available below.

Visit the Release 11 Information section within Four51 Application Updates on Access Four51 for the latest release information.

Feature Name	Description
Custom User Fields	Create Text, Selection or File type fields and assign them at the Company, Group or User level. Fields can be displayed to the buyer user for editing or hidden.  Tokens may be used on product spec forms, on themes, within site customization and on most auto emails.
Admin Permission Enhancement	When an admin user with the "Modify and Create Admin Users" permission changes his or her own permissions, s/he no longer has to log out and log back on again to see the change.
Report: Admin Line Item & Supplier Line Item	The Admin Line Item Report Product ID/Name field will display possible matches for the user to select to limit the results to one specific product. The matches will only include current products. To locate line items with deleted products, conduct a normal search without selecting an option.
Google Analytics: Commerce	The Four51 installation of Google Analytics now supports both page views and E-commerce.
Web Services	* Order Validate: New elements of the Billing & Shipping Address – Phone and Company Name * Order Request: New element – Cost Center Interop ID
Delete Buyer Company	Allow specific Admin users to delete Buyer Companies without having to contact Four51.
Performance Enhancement	When a user logs on, the Home page will display quickly and the numbers following each order status will load as the count is completed.
Approval Rules	Easier way to order a large number of sequential rules.
